## Land Based Learning

Blanding's Turtle Nesting

The 3<sup>rd</sup> semester concluded in June with 38 North Queens Community Students participating in the elective program.

In September, Land Based was again offered as an elective and continued along the same path as previous years, with students were taking on field trips in the North Queens area to learn about ecology, biodiversity and Mi'kmaq culture, using a two-eyed seeing approach.

The students also had the opportunity to take part in an archaeological session with Boreas Consulting to further learn about the 12,000 year history of Mi'kmaq in Mi'kma'ki.

Field Trip Kejimkujik

We look forward to continued growth with the project.
